FRAXX SYSTEM

Optimized RF Surgeon's System

(Sponsored by E.S.A.G)

FRAXX™ is a high-frequency technology. A non-traumatic, gentle and precise method of tissue vaporisation, using electromagnetic energy in the Megahertz (MHz) frequency range. The lateral heat developed in the cut tissue area is lower in the MegaHertz (MHz) range than the thermal damage caused by the kiloHertz (kHz) frequency. This excellent incision results in high quality scars and pieces for histological examination, such as those made with a cold blade. The High Frequency method provides an incision of excellent quality, minimal bleeding, faster healing, reduction of hypertrophic scars, minimal postoperative discomfort and maximum aesthetic results.

The **FRAXX** ^{TM} *equipped exclusive SmartShot random fractional shot control uses Radio Frequency (RF) technology, which distributes sub-ablative energy precisely, with a significant impact on the Dermis and minimal damage to the epidermis. With this unique feature of random energy distribution, called SmartShot , the Megapulse* **FRAXX**^{TM} *provides a perfect effect, known as thermal relaxation time, which keeps the tissue adjacent to the vaporized microdots completely intact and healthy for the formation of Neocollagenesis. Its effect is to promote regeneration in the dermis at the level of the papillary-reticular interface, through the stimulation of fibroblasts with consequent synthesis of collagen and elastic fibers, as well as epidermal regeneration given by the migration of keratinocytes.*

✓ **Regeneration and Tightening effect: Skin regeneration occurs through collagen contraction and renewal.**

✓ **Does not form giant crusts: Unlike dermal abrasion and deep peeling , Micro Fractionated Radiofrequency generates microcrusts, which leave the treated area on average between five and seven days after treatment.**

✓ **Minimum Down Time (recovery time): It is quick, allowing the patient to return to their normal daily activities almost immediately.**

BENEFITS

- *Personalised treatment: The four treatment programs are LOW (Gentle), MEDIUM (Moderate), FREE MODE (Free), SIC (Skin Impedance Control), each one works with different depths of penetration, according to the individual treatment required. The selected treatment level delivers a precise amount of RF energy to the exact layers on each area of skin touched by the micro fractionated tip.*
- *Low risk, quick recovery, minimal side effects: with small phototype restrictions, due to this exclusive technology. The possibility of hyperpigmentation is low compared to laser treatment and minimal recovery time.*
- *Modern, compact, easy and user-friendly design , provided by Touch Screen technology .*

FRAXX SKIN

VARIES FRACTIONAL TIPS FOR VULVAR AND BODY TREATMENT

MEDTECHLasers
Innovation for Smart Clinics

E.S.A.G.
EUROPEAN
SOCIETY of
AESTHETIC
GYNECOLOGY

INDICATIONS

- Vulvar atrophy
- Dryness
- Urethral caruncle
- Problems in the vestibule (fissures and pain)
- Vulvar regenerative treatment
- Chronic vulvar itching (selected cases)
- Vulvar flaccidity
- Lichen Sclerosu
- Vulvar atrophy
- Dryness
- Urethral caruncle
- Problems in the vestibule (fissures and pain)
- Vulvar regenerative treatment
- Chronic vulvar itching (selected cases)
- Vulvar flaccidity
- Lichen Sclerosus
- Between others

'Pick and choose your way'

FRAXX is equipped with a diverse range of handpieces and customizable settings, enabling practitioners to tailor treatments to individual patient needs. The device's versatility allows it to adapt to various skin types, ensuring optimal results across different medical concerns.

Endless Consumables
FRAXX simplifies professional with its endless consumables designed for the vast array of procedures it offers. The platform ensures cost-effective and convenient treatment sessions by eliminating the need for constant restocking. This feature makes FRAXX an economically viable choice for aesthetic practices.
